

ROLE-BASED CHECKLISTS / ADMIN + E-COMMERCE

VA Operations Starter Pack

Clear instructions for everyday delegated work.

18 work areas. 20 reusable processes. One practical pattern: know the goal, follow the steps, keep a clear record and ask the right person when a decision is needed.

Start small

Choose the three processes your VA actually needs first. Complete the client setup, run one practice task, and review the result before expanding.

How to read each process card

Section	What it tells the VA
Goal	The result you are trying to achieve.
When / One run	What starts the work and exactly what one task covers.
Client setup	Information the owner must supply before the process is published.
Checklist	Short actions, expected results and required evidence.
Ask / Never	When to stop for a decision and what remains outside your authority.
Done when	The real completion condition, not just a checked box.

Use this pack as a draft, not as an automatic policy

The detailed step breakdowns, evidence settings and review choices are suggested template controls. Fill missing client instructions and confirm authorization before use. No people, schedules, files, prices or account credentials are preconfigured.

The scope is administrative and marketplace operations. This is not a universal checklist for every kind of VA. Promotion registration, start and end are separate so the removal obligation stays visible.

Inside

Setup: page 2 • Template index: page 3

Process cards: pages 4–23 • Handover: page 24 • Blank template: page 25

BEFORE THE FIRST RUN

Set up once. Then make work clear.

Owner / manager: complete the setup. VA: follow the published instructions.

Agree these items	Record them in VA Relay
Client and timezone	Choose the correct workspace; use its agreed named timezone for deadlines.
VA and contact	Assign the actual VA. Map role labels to authorized team members.
Scope and resources	Fill bracketed placeholders; add approved tool, policy and folder links.
Decisions and review	Set permitted actions, approval gates and a separate reviewer when needed.
Timing	Confirm the real deadline. Do not invent a recurrence where none is specified.

Create the template

Processes & SOPs → + **Create process**. Copy a card's goal, timing, scope, setup and done condition into the SOP field. Copy its decision boundaries into **VA can do**, **Ask first** and **Never do**.

The editable guide includes paste-ready step titles. After pasting, configure each instruction, input type and evidence setting. Pasting titles alone does not configure them. Remove the unused default step. Save a draft; an owner/manager reviews and publishes it.

Create a run

Start run → enter a clear task title and reference → assign the VA → choose a separate reviewer if required → confirm the due date. A run covers one actual invoice, shipment, listing, case or agreed batch.

Execution sequence

My Day → Open run → View SOP → Do the external work → Save step → Attach evidence → Submit for review or Complete work.

When you cannot finish

Use **Issues & exceptions** → + **Report issue**. State the problem, what you checked, your proposed next action, an internal owner and a follow-up date. Use a blocking issue when the assigned outcome cannot finish. Set the run's waiting status separately when appropriate.

A waiting task may still be overdue. An unfavorable checklist answer does not automatically create an issue. Refresh to see another person's decision. Evidence records submitted work; it does not independently verify an external action.

The app catalogs are optional

The accompanying TypeScript file can add these templates to the starter's existing catalog. The JSON is developer data; V1 has no JSON upload/import screen. Templates still need client review and publishing.

FIND THE RIGHT PROCESS

Template index

Use one process per outcome. Keep the original work-area grouping; split separate obligations into separate runs.

Code	Process	Page
01	Get access to the approved tools	4
02	Collect and send an invoice	5
03	Update SOP and deadline trackers	6
04	Check marketplace account notifications	7
05	Create a return label and track arrival	8
06	Prepare B2B documents and check payment	9
07	Keep marketplace rules easy to find	10
08	Prepare content research and files	11
09A	Get approval and register a campaign	12
09B	Start an approved promotion	13
09C	End a promotion and verify the price	14
10	Apply an approved price change	15
11	Update product cost rules	16
12	Prepare and submit compliance information	17
13	Check a product listing each week	18
14	Check inventory sync and route alerts	19
15	Apply approved storefront changes	20
16	Prepare and verify a product launch	21
17	Review platform mail and record deadlines	22
18	Investigate a payment or account issue	23

Two important scheduling choices

17 is a daily message review. 13 is a weekly listing check. A monthly compliance schedule applies only to a confirmed monthly obligation. Other timing must be agreed with the client.

Role labels are placeholders

Operations lead, Customer service lead, Content lead, Marketplace lead and Business owner describe responsibility in this pack. They are not new app permission roles. Map each to an authorized member. The person who trains a process is not automatically the person allowed to approve every action.

PROCESS 01 / ACCOUNTS AND ACCESS

Get access to the approved tools

Open the correct tools, recognize each storefront, and report missing access.

WHEN	At onboarding and whenever the client assigns a new tool or storefront.
ONE RUN	One agreed set of tools and storefronts for one client.
WHO TO ASK	Operations lead or access administrator

Client setup — fill before publishing

[Tool and storefront list]; [approved access-request method]; [training/reference links]; [access-check deadline]. Use approved support or AI references only within client data rules.

01 Confirm the tool and storefront list · Text

Record the required tools, storefronts and account labels. Ask the client about any unclear account mapping.

02 Request the approved access · Check

Follow the client access-request method. Never ask for credentials in a task comment.

03 Test each assigned login · Text

Open each required account and check that the expected storefront is accessible. Record pass/fail results without secrets.

04 Save the approved reference links · Text

Add approved help/training links to the process resources, or record them for the manager to add. No copied credentials.

05 Resolve required access gaps · Check

Do not tick this until all required access is usable. Record any earlier issue and its resolution in the run.

06 Record the completed access handover · Text

Summarize the accounts you can use and the person to contact if access stops working.

VA CAN	Request the approved access; test assigned accounts; record which storefront each account belongs to.
ASK FIRST	A missing invitation, wrong account, unexpected permission, unfamiliar tool, or blocked login.
NEVER	Store passwords, recovery codes or tokens in the task; grant yourself extra permissions; use an unapproved account.

Done when

Every required access test passes and the tool/storefront list is recorded. Keep missing required access open with an owner.

Final review: OFF by default — enable during training when agreed.

PROCESS 02 / RECEIPTS AND INVOICE INBOX

Collect and send an invoice

Find the correct invoice or receipt and send it to bookkeeping with a traceable handoff.

WHEN	When an invoice or receipt is received or requested. Agree any inbox-check cadence with the client.
ONE RUN	One invoice or receipt, not an entire month of expenses.
WHO TO ASK	Operations lead; business owner for non-routine accountant questions

Client setup — fill before publishing

[Supplier and reporting period]; [approved invoice sources]; [bookkeeping destination]; [owner to copy on accountant replies]; [due date]. Start with receipts/subscriptions, then the agreed expense scope.

01 Record the requested document · Text

Enter the supplier, period and invoice/receipt reference. Put the identifier in the task title too.

02 Find the invoice or receipt · Check

Locate the correct document using the approved source. If missing, leave this unfinished and create an issue.

03 Check the document and attach it · Check · File required

Check it against the request; attach the approved, necessary document. Route discrepancies before continuing.

04 Send the document to bookkeeping · Check

Use the client-approved external channel. The app does not send it for you.

05 Save the handoff reference · Text

Record the message, submission or delivery reference and recipient. Do not write only "sent".

06 Record questions or follow-ups · Text

Write "None" when there are no questions. For standard accountant replies, use the approved response and copy the owner externally; route anything else.

VA CAN	Collect documents; check completeness against the request; find missing invoices; answer approved standard questions with the owner copied.
ASK FIRST	A missing document, conflicting details, unclear amount/currency/tax information, or a question outside the agreed standard replies.
NEVER	Pay an invoice, fabricate a document, change financial facts, or invent tax treatment.

Done when

The correct document has reached the approved bookkeeping destination and its handoff reference is saved.

Final review: ON — suggested safeguard; select a separate authorized reviewer.

Final review is enabled as a suggested training default, not a universal requirement. A manager can change it after agreeing the process.

PROCESS 03 / ADMIN TRACKERS

Update SOP and deadline trackers

Keep procedure ownership, obligations and document locations clear and findable.

WHEN	When a procedure, obligation, owner or file location changes; agree any routine review cadence.
ONE RUN	One requested tracker update or explicitly defined tracker review.
WHO TO ASK	Operations lead

Client setup — fill before publishing

[SOP index]; [compliance tracker]; [folder conventions]; [scope of this update]; [owner for each obligation].

- 01 Identify the records to update** · Text
Record the tracker, affected entries and reason for the update.
- 02 Update SOP status and owner** · Check
Record each affected SOP, its agreed status and responsible person. Use Processes & SOPs and Handovers where appropriate.
- 03 Record compliance details** · Text
Record requirement, country, exact deadline and owner for affected obligations. Write "No compliance changes" when outside this run.
- 04 Create or update dated work** · Check
For actionable deadlines, create or deliberately update the relevant run. Notes alone do not populate Deadlines.
- 05 Check folders and links** · Check
Use the approved folder structure; verify intended members can open the links without broadening access.
- 06 Save an update summary** · Text
Record what changed and where it can be found. Leave unresolved required details open.

VA CAN	Update agreed tracker entries; record responsibility; organize approved links and folders.
ASK FIRST	An unclear owner, conflicting deadline, unknown country requirement, or an uncertain move/delete instruction.
NEVER	Invent a deadline or obligation; publish unapproved procedures; delete client records without authorization.

Done when

The agreed updates are recorded, links work, and each affected obligation has its requirement, country, deadline and owner.

Final review: OFF by default — enable during training when agreed.

PROCESS 04 / MARKETPLACE ACCOUNT ADMIN

Check marketplace account notifications

Handle approved seller-portal administration and route account or policy problems.

WHEN	On an assigned account review or a new account/policy notification. Agree recurring coverage with the client.
ONE RUN	One account review or one clearly identified portal case.
WHO TO ASK	Operations lead; customer service lead for customer-facing decisions

Client setup — fill before publishing

[Approved seller portal and storefront]; [account-health checks]; [routine response rules]; [case ownership]; [review cadence or case deadline].

01 Confirm the account and case scope · Text

Record the seller account/storefront and review scope or case reference.

02 Review account-health notifications · Text

Read the assigned notifications. Record important messages and any exact deadlines.

03 Complete permitted portal follow-ups · Text

Carry out only the approved routine steps. Record the portal/case references or "No routine follow-up".

04 Coordinate the customer-facing handoff · Text

Route customer decisions to the customer service lead. Record the recipient and request, or "Not needed".

05 Record handled and routed cases · Text

Summarize completed portal actions and open issues with their owners and follow-up dates.

VA CAN	Review account health, follow approved policy steps and handle the portal side of return cases.
ASK FIRST	An account restriction, ambiguous policy requirement, appeal, refund decision or customer-facing response.
NEVER	Answer customers, decide refunds, change policy or make account decisions outside the approved instructions.

Done when

The assigned notifications and portal cases are handled within authority or routed with references and next actions.

Final review: OFF by default — enable during training when agreed.

This is a review-and-routing template. An unresolved account problem may live in a separate owned case; do not describe the account as fixed unless verified.

PROCESS 05 / RETURN LABELS AND SHIPMENT FOLLOW-UPS

Create a return label and track arrival

Create the authorized return label and follow the shipment until arrival is verified.

WHEN	After the customer service lead has decided the return and requested label creation.
ONE RUN	One return shipment.
WHO TO ASK	Customer service lead

Client setup — fill before publishing

[Return decision reference]; [approved shipping/returns tool]; [label instructions]; [tracking source]; [arrival confirmation method]; [follow-up interval].

01 Record the approved return decision · Text

Enter the order/return reference and the customer service decision authorizing the label. If absent, stop and ask.

02 Check the shipment details · Check

Confirm the approved sender, destination and package details. Do not copy unnecessary customer details into comments.

03 Create the return label · Text

Use the approved external shipping/returns tool and follow the client method. Record the label reference.

04 Record the tracking reference · Text

Enter the tracking link or identifier and the current carrier status.

05 Follow the shipment · Text

Record checks and the next follow-up while it is travelling. Keep the arrival step unfinished.

06 Verify the shipment arrived · Check · File required

Complete only after approved arrival confirmation. Attach the permitted delivery/receipt evidence.

07 Notify the customer service lead · Text

Record the arrival handoff reference. A refund remains a separate authorized decision.

VA CAN	Prepare the approved label and follow the shipment; record status and delivery proof.
ASK FIRST	No return decision, inconsistent shipment details, a failed label, a delayed/lost parcel, or uncertain arrival.
NEVER	Decide or issue a refund; assume a return is approved; close the run merely because a label was created.

Done when

The authorized label is created, the tracking reference is recorded, and shipment arrival is verified.

Final review: OFF by default — enable during training when agreed.

For a waiting status, choose the internal follow-up owner and describe the carrier dependency in the reason. Do not invite a carrier just to fill the waiting-person field.

PROCESS 06 / B2B PRO FORMAS AND INVOICES

Prepare B2B documents and check payment

Prepare requested invoice documents and verify the incoming bank transfer before shipment.

WHEN	When the customer service lead or business owner requests B2B invoice documents.
ONE RUN	One B2B order and its requested pro forma/final-invoice stages.
WHO TO ASK	Customer service lead or business owner

Client setup — fill before publishing

[Order details]; [approved pro forma/final templates]; [authorized tax instructions]; [incoming-payment verification method]; [shipping contact]; [due date].

01 Check the invoice request · Text

Record the order reference, requested document stages and approved template.

02 Prepare the pro forma if requested · Check · File required · N/A only if not requested

Use the approved template and tax instruction. Upload the permitted copy. N/A is allowed only when not requested.

03 Prepare the final invoice if requested · Check · File required · N/A only if not requested

Follow the approved issuance timing and template. Attach the permitted copy. N/A is allowed only when not requested.

04 Verify the bank transfer arrived · Check

Use the approved verification source. Leave unfinished and raise a blocking issue if payment is missing, uncertain or inconsistent.

05 Record payment verification · Text

Record the order, verified amount/currency and authorized verification reference without exposing banking credentials.

06 Tell the shipping contact the result · Text

Send the verification through the real shipping workflow and record the communication reference. Do not rely on this checklist to hold an order.

VA CAN	Prepare requested documents from approved templates and check incoming payment through authorized access.
ASK FIRST	Unclear tax treatment, mismatched order details, missing transfer, a discrepancy or missing verification access.
NEVER	Choose a tax rate; claim a payment arrived without evidence; pay vendors; authorize dispatch beyond your role.

Done when

The requested documents are prepared, transfer arrival is verified, and the shipping contact receives the verification reference.

Final review: ON — suggested safeguard; select a separate authorized reviewer.

Use 0% VAT reverse charge only when the client has confirmed it applies and supplied the approved instruction. This template does not determine tax treatment. Arrange document stages in the client-approved order; no invoice-issuance sequence is prescribed here. A blocked run does not physically prevent external shipping.

PROCESS 07 / MARKETPLACE RULES IN ONE PLACE

Keep marketplace rules easy to find

Maintain one clear reference per channel using completed, approved policy research.

WHEN	At the initial consolidation and when approved channel rules change.
ONE RUN	One channel rule page or one approved update to it.
WHO TO ASK	Customer service lead

Client setup — fill before publishing

[Channel]; [completed policy research]; [approved rule-page location]; [reviewer]; [effective date/version if supplied].

01 Open the completed policy research · Text

Record the approved research reference and channel.

02 Record the return policy · Text

Summarize the approved return conditions without changing their meaning.

03 Record who pays for the label · Text

Use the approved research; escalate an unclear or conditional answer.

04 Record the refund rules · Text

Preserve the approved conditions and decision authority.

05 Save and check the channel page · Link

Save it in the approved location and record a working link.

06 Submit the reference for review · Check

Check it against the research and submit for the designated reviewer. Do not describe it as approved before review.

VA CAN	Organize and transcribe approved research into the agreed reference format.
ASK FIRST	Conflicting, missing or unclear research; a proposed rule change; uncertain validity.
NEVER	Invent policy, choose who pays, decide refunds, or replace approved research with assumptions.

Done when

The channel reference accurately records return policy, label payer and refund rules, and is approved and findable.

Final review: ON — suggested safeguard; select a separate authorized reviewer.

PROCESS 08 / CONTENT RESEARCH AND ORGANISATION

Prepare content research and files

Prepare useful references and organized files for the content lead to decide and create.

WHEN	When the content lead requests research, organization or repetitive preparation work.
ONE RUN	One research/preparation brief with an agreed deliverable.
WHO TO ASK	Content lead

Client setup — fill before publishing

[Research brief]; [reference/competitor scope]; [approved sources]; [folder conventions]; [required deliverable]; [due date].

01 Read the preparation brief · Text

Record the topic, scope and expected deliverable. Ask before researching outside it.

02 Collect relevant references · Text

Record reference/competitor links and a short note explaining relevance to the brief.

03 Organize the working files · Check

Use the approved folder names and locations; keep the requested materials findable.

04 Complete the agreed preparation · Text

Record the repetitive preparation performed, or "No additional preparation requested".

05 Hand the materials to the content lead · Text

Save the deliverable location and handoff reference. The content lead decides and creates.

VA CAN	Research approved reference/competitor content, organize files, and complete agreed repetitive preparation.
ASK FIRST	An unclear brief, missing materials, a requested creative decision or a change in scope.
NEVER	Create or publish ads/content, choose strategy, or make creative decisions under this preparation-only scope.

Done when

The requested references and organized files are handed to the content lead with a clear location.

Final review: OFF by default — enable during training when agreed.

PROCESS 09A / PROMOTIONS - REGISTRATION

Get approval and register a campaign

Register for a marketplace campaign only after the business owner approves the exact proposal.

WHEN	When campaign registration is requested, before its confirmed registration deadline.
ONE RUN	One campaign-registration request for one channel or explicitly approved group.
WHO TO ASK	Business owner for permission; marketplace lead for preparation

Client setup — fill before publishing

[Campaign/channel]; [approved commercial plan]; [registration requirements]; [deadline]; [business owner as run reviewer].

01 Record the campaign proposal · Text

Enter the campaign/channel, proposed products and approved plan reference. Include exact terms for the owner to decide.

02 Confirm the registration deadline · Text

Record the source wording and confirmed deadline. Make sure the run due date matches the approved cutoff.

03 Get permission and register · Check · Permission first

Click Request permission with the exact proposal. Wait for the business owner's approval, refresh, then register externally. Do not act while waiting.

04 Save the registration result · Text

Record the confirmation/case reference. If submission failed, leave required registration unfinished and route the problem.

05 Arrange the promotion start and end runs · Text

Record links or references to the separate start and end tasks, or explain why no execution tasks are needed for this registration.

VA CAN	Prepare campaign details and register only after the owner gives the required permission.
ASK FIRST	Campaign eligibility, changed terms, missing approval, registration errors or any unapproved price/commitment.
NEVER	Register without the owner's go-ahead; change the approved commercial terms; treat approval as unlimited authority.

Done when

The approved registration is submitted, its result is recorded, and separate start/end work is arranged where needed.

Final review: OFF by default — enable during training when agreed.

Assign the business owner as the run reviewer. Registration permission is not final review and does not create promotion start/end tasks automatically.

PROCESS 09B / PROMOTIONS - START

Start an approved promotion

Apply approved promotion prices on the correct start date and verify the live result.

WHEN	On the approved promotion start date/time in the agreed client timezone.
ONE RUN	One product/channel, or a clearly listed batch with a coverage record.
WHO TO ASK	Marketplace lead; business owner for changes to campaign decisions

Client setup — fill before publishing

[Campaign reference]; [products/channels]; [approved promo prices and currencies]; [start cutoff/timezone]; [separate end-task reference]; [permitted update method].

- 01 Check the plan and start time** · Text
Record the campaign reference, targets, currency and agreed start time. Confirm the plan is approved.
- 02 Confirm a separate end task exists** · Text
Record the end-run reference and removal deadline before beginning the promotion.
- 03 Record the current price** · Text
Verify the correct live product/channel and record its current price and currency.
- 04 Apply and verify the promotion price** · Check · Before + After files
Follow the approved external method at the correct time. Attach the initial state as Before and verified result as After.
- 05 Record coverage and exceptions** · Text
List targets verified and any issue references. Unapplied or unverified required targets block completion.

VA CAN	Enter the exact approved promotion prices and check before/after states.
ASK FIRST	A missing end task, unclear timezone, unapproved price, conflicting live result or rejected update.
NEVER	Choose promotion terms/prices; register an unapproved campaign; assume an end task will be created automatically.

Done when

Every target in this run has the approved promotion price and verified before/after records, or required failures remain open.

Final review: OFF by default — enable during training when agreed.

PROCESS 09C / PROMOTIONS - END

End a promotion and verify the price

Remove the promotion on its end date and verify the approved post-promotion price.

WHEN	On the approved promotion end date/time in the agreed client timezone.
ONE RUN	One product/channel, or a clearly listed batch with a coverage record.
WHO TO ASK	Marketplace lead

Client setup — fill before publishing

[Campaign and start-run references]; [end deadline/timezone]; [target products/channels]; [approved post-promotion prices/currencies]; [removal method].

01 Confirm the removal scope and deadline · Text

Record the campaign, targets and confirmed end date/time.

02 Check the approved replacement prices · Text

Record the source of the approved post-promotion prices and currencies.

03 Remove the promotion and verify · Check · Before + After files

Use the approved external method. Attach the promotional state as Before and the checked replacement state as After.

04 Record coverage and any failed removals · Text

List the targets checked. Create owned issues for failed or unverified required changes and leave them incomplete.

05 Record the final removal result · Text

Confirm what was removed and where the final prices can be checked.

VA CAN	Remove the promotion and enter the client-approved post-promotion prices.
ASK FIRST	An unclear replacement price, conflicting end time, removal failure or live price mismatch.
NEVER	Assume the original price must be restored; decide new prices; close the run before verifying the live result.

Done when

Promotion pricing is removed for every target in scope and the approved replacement prices are verified.

Final review: OFF by default — enable during training when agreed.

PROCESS 10 / PRICE ADJUSTMENTS

Apply an approved price change

Make each requested channel price match the approved plan and check before and after.

WHEN	When a standard price change is assigned, at its approved effective time.
ONE RUN	One requested product/channel price change or an explicitly defined batch.
WHO TO ASK	Marketplace lead

Client setup — fill before publishing

[Price plan]; [products/channels]; [approved price/currency]; [effective time/timezone]; [permitted portal method].

- 01 Read the approved price plan** · Text
Record the request, target products/channels, approved price and currency.
- 02 Check the effective time** · Check
Confirm when the new prices should apply before changing them.
- 03 Record the current live price** · Text
Check the correct product/channel and save the existing price and currency.
- 04 Change and verify the live price** · Check · Before + After files
Use the approved portal method. Attach Before and After evidence with the correct labels.
- 05 Log every change or failed update** · Text
Record target coverage and issue references. Do not complete while a required change is unverified.

VA CAN	Enter standard changes exactly as approved and verify live prices.
ASK FIRST	An inconsistent price plan, unclear currency, rejected update or unexpected live result.
NEVER	Choose a pricing strategy, invent a discount or make unapproved changes.

Done when

All requested prices in scope match the approved plan and before/after results are recorded.

Final review: OFF by default — enable during training when agreed.

PROCESS 11 / PRODUCT COST RULES

Update product cost rules

Keep landed costs and product cost rules aligned with the approved cost information.

WHEN	When updated cost data or a cost-rule update is assigned. Inventory-value reports are separate requests when asked.
ONE RUN	One requested product cost update or an agreed batch.
WHO TO ASK	Marketplace lead; business owner for financial decisions

Client setup — fill before publishing

[Approved cost tool]; [source cost data]; [products/rules in scope]; [currency/units]; [authorized calculation instructions]; [due date].

01 Confirm the cost-update scope · Text

Record the product identifiers, requested rules and approved data source.

02 Check values, currency and units · Check

Verify that the source contains the information needed. Resolve discrepancies rather than guessing.

03 Update the authorized cost rules · Check

Apply the approved values and instructions in the actual cost tool.

04 Verify the saved result · Check · File required

Compare saved costs/rules with the approved source. Attach a permitted verification record.

05 Record the update and exceptions · Text

Record what changed, source references and any remaining requested follow-up.

VA CAN	Maintain landed costs and rules using approved data; prepare a requested inventory-value output.
ASK FIRST	Missing cost components, conflicting units/currencies, uncertain rules or an unexplained margin result.
NEVER	Invent costs or calculation rules; make accounting decisions; present an unverified margin as correct.

Done when

The approved values and rules are saved in the cost tool and checked against the supplied source.

Final review: OFF by default — enable during training when agreed.

For an accountant's inventory-value request, create a separate dated run with the requested period, scope and delivery reference. This checklist is not a calculation engine.

PROCESS 12 / COMPLIANCE REQUESTS

Prepare and submit compliance information

Send the requested compliance information on time and retain a submission reference.

WHEN	For each compliance request. Use monthly recurrence only for a confirmed monthly obligation.
ONE RUN	One obligation for one reporting period and country, unless the client explicitly groups them.
WHO TO ASK	Marketplace lead or designated compliance owner

Client setup — fill before publishing

[Requirement]; [country]; [reporting period]; [requested data/units]; [approved data source]; [submission channel]; [confirmed cutoff and timezone].

01 Confirm the exact request and deadline · Text

Record requirement, country, period, source wording and confirmed cutoff/timezone. Resolve ambiguity before scheduling.

02 Gather the requested information · Check

Use the approved data source for the exact reporting period and units.

03 Check completeness against the request · Check

Resolve missing or inconsistent entries with the internal owner; keep required gaps open.

04 Submit through the approved channel · Check

Use the actual approved service or communication tool before the confirmed deadline.

05 Save submission proof · Text · File required

Record the actual submission/receipt reference and attach the permitted confirmation or submitted record.

06 Update the deadline record · Check

Record completion against the actual obligation. Route any new follow-up requirement as separate dated work.

VA CAN	Gather and check requested information; track documents/deadlines; submit as instructed.
ASK FIRST	Missing data, uncertain units or period, a conflicting cutoff, or anything requiring interpretation of a requirement.
NEVER	Invent compliance rules, weights or deadlines; assume the same cutoff applies to all countries/reports.

Done when

The complete requested information is submitted through the approved channel and its submission reference is recorded.

Final review: OFF by default — enable during training when agreed.

For a monthly WEEE-weight workflow using a "before the 10th" instruction, confirm the exact cutoff with the client. Do not silently change it to "on the 10th" or apply it to unrelated reports. Use the client's definitions and data instructions.

PROCESS 13 / WEEKLY LISTING CHECK

Check a product listing each week

Check listing health, fix only permitted problems, and record every fix or escalation.

WHEN	Weekly. Agree the weekday, deadline time and client timezone before creating a schedule.
ONE RUN	One product on one channel; use a documented coverage list for an approved batch.
WHO TO ASK	Marketplace lead

Client setup — fill before publishing

[Product/channel list]; [live listing link]; [approved content and prices]; [Buy Box expectation]; [permitted fixes]; [weekly deadline].

01 Confirm the listing being checked · Text

Record the product identifier, channel and live listing reference.

02 Record whether the listing is live · Choose a result

Choose the observed status. An issue result does not open an issue automatically; record and route it in the fixes/issues step.

Choices: Live / Offline / Unable to verify

03 Check the Buy Box · Text

Record the observed Buy Box result against the client's expectation. Ask when unclear; do not invent a passed result.

04 Check category and delivery promise · Text

Compare both with the approved setup and record discrepancies, or "Matches approved setup".

05 Check images and content · Text

Compare the listing with approved material. Record differences, or "Matches approved material".

06 Record the live price and currency · Text

Enter the observed price/currency and compare them with the approved plan.

07 Fix permitted issues and route the rest · Text

Log each actual fix and verification. For unresolved problems, create an issue with owner/next action/follow-up; write "None" only if no issues.

08 Attach the listing-check record · Check · File required

Attach a permitted screenshot or coverage record showing the target and findings.

VA CAN	Inspect every required listing attribute and make only explicitly permitted corrections.
ASK FIRST	An offline listing, unapproved price/content difference, uncertain Buy Box result or a problem outside permitted fixes.
NEVER	Choose new prices/content, make supply-chain decisions, or claim a problem was fixed merely because it was reported.

Done when

All required checks are performed, every fix is logged, and unresolved exceptions have an owner and next action.

Final review: OFF by default — enable during training when agreed.

This is an inspection-and-routing outcome. A documented exception is not a successful repair. Create a separate repair run when needed; an unresolved blocking issue on this run prevents submission.

PROCESS 14 / INVENTORY SYNC AND STOCK ALERTS

Check inventory sync and route alerts

Check each assigned channel for inventory-sync errors and pass low-stock alerts to the right owner.

WHEN	At the client-agreed check cadence or when an inventory-sync/stock alert is assigned.
ONE RUN	One agreed set of channels, with each channel explicitly covered.
WHO TO ASK	Marketplace lead

Client setup — fill before publishing

[Inventory-sync tool]; [channels]; [approved sync checks/fixes]; [client-defined stock alerts]; [review cadence]; [escalation contact].

01 Confirm the channels to check · Text

Record the expected channel list and review scope.

02 Check inventory sync on each channel · Text

Record each channel's observed sync result. Do not assume one successful channel covers the rest.

03 Fix only permitted sync errors · Text

Follow approved instructions and record the actual correction and verification, or "No permitted correction needed".

04 Pass on low-stock alerts · Text

Record relevant alerts and the handoff to the marketplace lead, or "No low-stock alerts".

05 Log unresolved errors with owners · Text

Create linked issues and next checks for unresolved problems; summarize the resulting coverage.

VA CAN	Check channel sync, perform approved corrections and pass low-stock alerts to the marketplace lead.
ASK FIRST	Unresolved sync errors, conflicting inventory figures, unexpected alerts or a correction outside the agreed method.
NEVER	Invent stock thresholds, place replenishment orders or make supply-chain decisions.

Done when

All assigned channels are checked, permitted fixes are verified, and remaining errors/low-stock alerts are routed and logged.

Final review: OFF by default — enable during training when agreed.

PROCESS 15 / BACK-END CHANGES ON STOREFRONTS

Apply approved storefront changes

Apply supplied settings, profile and legal-text changes in the correct seller portal.

WHEN	When the business owner assigns a storefront change or approved audit correction.
ONE RUN	One approved change request for one storefront, or a defined list of changes.
WHO TO ASK	Business owner

Client setup — fill before publishing

[Approved change request or audit]; [storefront/portal]; [exact settings/text]; [business owner as reviewer]; [verification method]; [deadline].

01 Record the requested changes · Text

Identify the storefront and list the exact approved settings/text or audit fixes.

02 Check the current configuration · Text

Compare the current portal state with the request. Ask about unclear differences before editing.

03 Get permission and apply the exact change · Check · Before + After files · Permission first

Request the business owner's decision on the exact change. After approval, apply it externally and attach Before/After evidence.

04 Verify the saved or published result · Text

Check the agreed verification location. Record results for all requested items; route unresolved failures.

05 Record the change handoff · Text

Summarize completed changes and provide the approved verification reference.

VA CAN	Prepare and apply the exact supplied changes within the approved request.
ASK FIRST	Missing approved text, ambiguous instructions, a request to interpret legal terms or an unexpected result.
NEVER	Draft legal policy, choose new business terms, change unrequested settings or broaden permissions.

Done when

The approved changes are saved and the resulting settings/profile/text are verified and recorded.

Final review: ON — suggested safeguard; select a separate authorized reviewer.

Before-action permission and final review are suggested safeguards for this template, not automatic business authority. Choose the business owner as reviewer, and never permit N/A on the gated change step.

PROCESS 16 / NEW PRODUCT LAUNCHES

Prepare and verify a product launch

Help a product go live on the required marketplace using approved content and settings.

WHEN	When the business owner assigns a product launch and confirms the target channels and timing.
ONE RUN	One product on one marketplace; make separate runs for other required channels.
WHO TO ASK	Business owner; marketplace lead for operational assistance

Client setup — fill before publishing

[Product reference]; [target marketplace]; [approved content/assets/settings]; [launch timing]; [publishing authority]; [verification checklist].

01 Confirm the launch brief · Text

Record the product, marketplace, approved materials and agreed launch timing.

02 Create the required listing · Check

Follow the approved portal method for the correct product and channel.

03 Enter the approved content and settings · Check

Use the supplied material without making unapproved content/strategy decisions.

04 Publish as instructed · Check

Use the actual marketplace workflow only within the confirmed publishing authority and timing.

05 Check the live listing · Check · File required

Verify the live result against the agreed checklist and attach the permitted proof. Keep publishing/verification failures open.

06 Save the live reference and handoff · Text

Record the live link and notify the owner through the agreed channel.

VA CAN	Prepare listings, enter approved content, publish only as authorized and verify the live result.
ASK FIRST	Missing approved assets/settings, uncertain launch timing, an unpublished/rejected listing or content outside the brief.
NEVER	Invent marketing content, choose a launch strategy, or publish outside the approved scope/timing.

Done when

The listing is created, approved content is entered, publishing is completed as instructed, and the live result is checked.

Final review: ON — suggested safeguard; select a separate authorized reviewer.

The application does not publish listings. Final review is a suggested training safeguard; add a before-action gate if the client requires a separate live-publish decision.

PROCESS 17 / PLATFORM MAIL AND DEADLINE REGISTER

Review platform mail and record deadlines

Read marketplace/compliance messages, capture every actionable deadline, and route non-routine work.

WHEN	Daily. Confirm account coverage and the client-local deadline; do not silently change daily coverage to weekdays.
ONE RUN	One day's review of the agreed marketplace and compliance accounts.
WHO TO ASK	Business owner; designated owner for each routed request

Client setup — fill before publishing

[Approved accounts]; [routine-response SOPs]; [daily coverage/deadline]; [deadline tracker]; [escalation owners]; [client timezone].

01 Review the assigned inboxes and portals · Check

Read the marketplace/compliance messages for every agreed account. This app does not read email for you.

02 Record messages and exact deadlines · Text

Record the source/reference and deadline wording for actionable messages, or "No actionable deadlines". Ask about ambiguity.

03 Create separate dated work · Text

Create or link a run for each actionable obligation with confirmed due date, reference and source. Record run references, or "None needed".

04 Handle approved routine requests · Text

Use the approved routine instructions. Record actions and evidence references, or "No routine actions".

05 Route other requests with a proposal · Text

Create issues or assigned follow-up work with an internal owner, recommendation and follow-up date. Record references or "None".

06 Check the deadline register · Check

Confirm the dated runs appear in Deadlines. Recording a date in notes alone is not enough.

VA CAN	Read messages, enter deadlines, handle approved routine matters and propose next actions for the rest.
ASK FIRST	Ambiguous deadline wording, non-routine requests, blocked access or an action requiring a business decision.
NEVER	Guess deadlines, make unapproved decisions, answer customers under this operations-only scope, or mark routed work as resolved.

Done when

All assigned accounts are reviewed, every actionable deadline has dated work, and routine/routed outcomes are recorded.

Final review: OFF by default — enable during training when agreed.

Completing this daily review does not complete the separate obligations it discovers. The app has no business-holiday calculator; ask the owner to resolve unclear working-day cutoffs.

PROCESS 18 / PAYMENT AND ACCOUNT ISSUES

Investigate a payment or account issue

Find out what happened, recommend the next action, and put the decision with the business owner.

WHEN	When a failed payment, reminder, blocked account or payout/refund-blocking issue is assigned.
ONE RUN	One investigation and owner handoff. Any later resolution work is separately assigned or explicitly added to scope.
WHO TO ASK	Business owner

Client setup — fill before publishing

[Account/case reference]; [approved investigation access]; [symptom]; [owner]; [handoff deadline]; [follow-up date].

01 Identify the problem and affected account · Text

Record the account/case reference, observed error and impact without including credentials.

02 Check the approved information · Text

Record what you inspected and the findings. Distinguish observation from an untested explanation.

03 Prepare the recommended next action · Text

State what needs to happen next and which decision belongs to the owner.

04 Create the owned issue and handoff · Text

Create a linked issue for the owner with recommendation and follow-up date. Record its reference and the owner handoff.

05 Record the investigation outcome · Text

State "Investigated and handed to owner" when that is the completed scope. Keep any remaining decision/resolution visible.

VA CAN	Investigate observed errors and account/payment status; record findings and recommend a next action.
ASK FIRST	A decision, payment, access change or corrective action outside the approved investigation instructions.
NEVER	Make payments, issue refunds, alter payment credentials, or describe the issue as fixed without verification.

Done when

The investigation, findings and proposed next action are handed to the owner, with a traceable decision/follow-up record.

Final review: ON — suggested safeguard; select a separate authorized reviewer.

The business owner pays and approves. For an investigation-only run, a routed issue may be non-blocking if the owner agrees; it remains open separately. If the assigned outcome includes resolution, keep the run blocked/waiting until the authorized result is verified.

TEACH → PRACTICE → APPROVE → OWN

Make the handover visible

Create a handover for each process, not one broad “trained” checkbox for the whole job. Use **Handovers** → + **Add handover** and select the VA/trainee and trainer.

Stage	What actually happened
Not started	The process has not yet been taught.
Demonstration	The trainer shows the task once in a call or recording.
Guided run	The VA does the work while the trainer watches.
Independent run	The VA performs the work alone.
SOP drafted	The VA writes the procedure and saves its draft.
SOP approved	An authorized person approves it; an owner/manager publishes it. Record sign-off separately.
Owned	Process responsibility is formally handed to the trained VA.

Suggested trainer groups

01-04	Operations lead
05-07	Customer service lead
08	Content lead
09-14	Marketplace lead
15-18	Business owner

Keep training and approval separate

A Marketplace lead can teach campaign registration, but 09A still needs the Business owner's go-ahead. Publishing a SOP does not automatically advance the handover, and “owned” does not expand the VA's authority.

First practice session

Use dummy data and two separate accounts. Create one invoice run, save an answer, reopen it, attach allowed proof, submit, request a correction, correct it, resubmit and accept. Then practice one permission request and one owned issue.

Keep later responsibilities later

From month 3, when agreed with the owner: product/channel margin and operating-expense sheets, subscription audit, payout reconciliation and cashflow/forecasts. These are later-phase activities, not extra processes installed by this pack. The app does not calculate accounts or forecasts.

COPY THIS STRUCTURE FOR THE NEXT PROCESS

A reusable task template

Use the same short structure whenever the client delegates something new. These are content labels for the existing SOP and run fields, not new app features.

Field	Fill with
Title	[Action + object + scope]
Goal	[The outcome the client needs]
When	[Request, event or agreed schedule]
One run covers	[One invoice, shipment, listing, case or defined batch]
Client setup	[Tools, resources, approved policy and deadline]
Who to ask	[Authorized internal person]
Steps	[Action] + [How / expected result] + [Proof needed]
Done when	[An observable completion condition]
VA can / Ask / Never	[Permitted actions, decision points and excluded actions]
Review / Permission	[Who reviews; which action needs permission first]

Copyable issue message

Ask for a decision with enough context

Task / reference: [Exact task and business reference]
 What happened: [Observed problem]
 What I checked: [Actions and findings]
 Recommended next action: [Specific proposal]
 Who needs to act: [Authorized internal person]
 Deadline / next follow-up: [Confirmed client-local dates]
 Evidence: [Approved link or attachment; no credentials]

Before you close the task

The actual outcome is complete. Required steps are saved. Required proof is attached. Necessary permission has been recorded. No blocking issue remains. The reviewer has accepted it when final review is required.

For a review-and-routing task, a separate unresolved issue may remain open with an owner. That means “review complete; issue routed,” not “problem fixed.” Do not hide unfinished work by choosing a terminal status.

Keep the client's data in the right workspace

All active workspace members can read its operational records and attachments. Do not attach secrets or unnecessary personal data. Use approved external tools for actual messages, payments, shipping and marketplace actions; the checklist does not perform them.
